DETAILED ACTION

Status of Claims

1. This communication is responsive to amendment filed on January 20, 2006, where applicant amended claims 1,9,11, and cancelled claims 4,6-8,10,12. Claims 1-3,9,11 are pending.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Pitcher (Reg. No. 25908) on March 31, 2006. (see Interview Summary)

The application has been amended as follows:

Claim 1 (Amended): An input/output control system for controlling the input and output of commands from a plurality of consoles to a server, comprising:

an input/output status controller, based on control tables, controlling an input/output status of commands from respective consoles to the server so that only one console at a time is allowed to have input privilege and other of the consoles are allowed to have output privileges;

an input/output controller, based on privilege control tables, controlling the input/output of commands based on the input/output status so that the commands from the an input privileged

Art Unit: 2157

consoles are sent to the server, and response messages or results of execution from the server are sent to the input privileged console and the output privileged consoles; and

a switching mechanism, after receiving the results of execution, automatically switching the input privileged console to having the output privilege after receiving the results of the execution.

Claim 9 (Amended): A computer readable storage medium storing a program for implementing with a computer a method of controlling command input/output from a plurality of consoles to a server, the method comprising:

receiving commands input from the plurality of consoles;

updating an input status of the server in response to a first command received from a first console;

controlling, based on control tables, the input status of the server to exclude input of other commands to the server while in the updated input status,

wherein only one console at a time is allowed to have input privilege and other of the consoles are allowed to have output privilege with the server;

controlling, based on privilege control tables, the input/output of commands based on an input/output status so that the commands from the an input privileged console are sent to the server, and the response messages or the results of execution from the server are sent to the input privileged console and the output privileged consoles; and

automatically switching, after receiving the results of execution at a switching mechanism, the input privileged console to having the output privilege after receiving the results of the execution.

Application/Control Number: 09/735,795 Page 4

Art Unit: 2157

Claim 11 (Amended): A method of controlling command input/output from a plurality of consoles to a server, the method comprising:

receiving commands input from the plurality of consoles;

updating an input status of the server in response to a first command received from a first console:

controlling, based on control tables, the input status of the server to exclude input of other commands to the server while in the updated input status,

wherein only one of the plurality of consoles at a time is allowed to have input privilege and other of the consoles are allowed to have output privilege with the server;

controlling, based on privilege control tables, the input/output of commands based on an input/output status so that the commands from the an input privileged console are sent to the server, and the response messages or the results of execution from the server are sent to the input privileged console and the output privileged consoles; and

automatically switching, after receiving the results of execution at a switching mechanism, the input privileged console to having the output privilege after receiving the results of the execution.

Allowable Subject Matter

- 3. Claims 1-3,9,11 are allowed.
- 4. For reasons of allowance, refer to applicants remarks dated 1/20/2006.

Application/Control Number: 09/735,795 Page 5

Art Unit: 2157

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

Patent No US006463460B1, Simonoff teaches collaboration between users based on

privilege levels.

Patent No 3,919,483, Gindi et al teaches a controller controlling input/ouput time slots to

processing systems and subsystems.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Ramy M. Osman whose telephone number is (571) 272-4008.

The examiner can normally be reached on M-F 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Ario Etienne can be reached on (571) 272-4001. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
